MEMORANDUM

TO: The Members of the EPA/OSHA Task Force

FROM: Kay Thomas Packett

Enclosed for your immediate review is a letter from Dr. Max Layard advising OSHA officials of the availability of new data relevant to the issue of ETS exposure in the workplace, and requesting that OSHA keep the RFI record open for information and commentary concerning the two studies.

The studies referred to in Layard's letter are the American Cancer Society's Cancer Prevention Study II and another epidemiologic study funded in part by the National Cancer Institute.

This assignment is the result of a request from American Tobacco Company representatives. Since the letter must be mailed by close of business tomorrow, we would appreciate receiving your comments as soon as possible.

Please let me know if you have questions.
